#### Approved For Release 2004/0**3/6)N/i DENT#A0**-00809A000500830171-8 COMPLICATION 25X1 - 2 at Khalmaryo the coel is mined on the surface and is ac 25X1 good no Vorkuta coal. Also, there is coal at Xbanovey and in 1941 there was a plan to built a railroad from there to Rhabarov. A veterinarian. a free man, told no that construction of this read was stopped in the 25X1 winter of 1941-42. 4. 25X1 6. There was a mine at Koshim, 140 km from Koshwa on the Peakern-Yorkuta railroad. And every your geologists used to be sent into the Urale, 25X1 starting from Aber. to prospect for new fields. There would be 10 to 15 goologists, but they never had enough equipment and emplies to get much routs. they found oil and radium along the Izhua river. Rechora-Vorbuta Bailingad 25X1 25X1 25X1 The distance from Kozhva, on the Pochora rivor, to Verkata is 486 km. 25X1 the type of locomotives, but the freight cars are either of box or half-car type and are mostly four-axle. There are a few twoaxle cars. The number of trains daily varied from four to 16, depending on the weather. Bridges, repair shops, loccootive depots, water towers, and other buildings are almost completely standardized in construction end espacity. The buildings are mearly all wooden. The bridges are all made of reinforced concrets. The water supply all along the way is from gravity tenks. \_\_\_\_\_ those are heated internally, because they 25X1 are not insulated. They run a passenger train every other day. 25X1 The railroad station on the Pachorn river is at Kozhva, a town of two thouseld. On the third has there is a railroad bridge, reinforced concrete, between 1,000 and 1,200 naters long, and high enough for barges to pean under. On the eighth km there is a wooden railroad station called Pachora. It has passenger waiting accommodations, a locomotive depot, and repair shops, probably for minor repair work only. Pechora has seven or eight station tracks which are frequently loaded to capacity with coal trains going south. On the 66th km the railroad crossos the river Sanya on a reinforced concrete bridge about 300 m long. Before emproaching the bridge, there is a small station called Kashavoy, with no incilities of any kind. On the 110th les there is a larger station. Kas-Yu. It has a locomotive denot, water supply, a number of barracks for employees and prisoners, but no repair facilities. One mile beyond this station a bridge 500 to 600 m long crosses the river Kas-Yu. On the 142nd km there is enother bridge from 400 to 500mlong over the river Kozhim. On the 145th km there is a atation, Kozhim, which is of medium size and has five sidings and a water supply. On the 166th km there in a 200 to 250 meter bridge over the river Chernaya. On the 190th km there is a medium-sized station called Inta, which has a unter supply. From Into there is a spur of 15 km northwest to a coal mining village called Intlag. On the 19lat ha the ruilroad crosses the river Intal which is approximately 350 m wide. On the 222nd km there is a large station. Kochmen, with a large locamotive depot for five to mix locomotives. It also here a water supply and repair shops. There are six or coven midings in front of the station. The locomotive depot itself is about one km nouth of the station.

Approved For Release 2004/03/31: CIA-RDP80-00809A000500830171-8

25X1 CONFIDERIAL DESCRIPTION OF THE PROPERTY OF THE - 3 -At the 20th km there is a small station, Asimez, which has water supply. On the 242nd km there is a bridge about 300 m long over the river Rochnes. On the 286th km there is a bridge approximately 800 m long over the river Usa. On the 290th km there is a small station. Abez, which is not important to the railroad, but is the administrative center for concentration came of the area. On the 346th km a large station. Siraya Maska, has a locomotive lepot and small repair shops. They are about one km south of the station. The water supply is directly at the station, which has six or seven sidings. At the 424th km 25X1 is Khanovy, which has only a water supply and four or five sidings. The last station is Vorkris. at the 436th km. it has large locometive depote and big repair shops, 25X1 25X1 25X1 9. Formerly they used this spur line to chip coal to Ust-Yorkuta, where the coal was put on barges and shipped down the Usa river to the Pechora river. But this apur line is not important now. Since the Pechora-Vorinta railroad was completed in 1943 most coal movements are by train. 25X1 10. Every train has two locomotives and they go very fast, 50 or 60 km per hour. The passenger trains are especially fast. They take only 22 hours for the 486 km. The trains run through all kinds of weather. There are many fogs and heavy atorms, but the engineers just take an extre drink of vodka and go through. 25X1 The braffic southbound consisted entirely of Vorkuta coal. Northbound traffic is approximately 60% empties and the balance is lumber, provisions for inhabitants and prisoners, and prisoners themselves. The prisoners are carried in converted box cars, 72 persons to a four-axle car and 36 to a two-axle car. They have community bunks and a stove in the middle. The care look like a hastily converted job. Some of these prisoners are brought from the Far East, which takes as long as two months. Every day 1,000 or 1,200 prisoners would arrive. Generally the number of sidings at the blations is much more than they ordinarily need. This is because they need a reserve for trains which must await favorable weather to proceed. 25X1 13. The rails themselven are approximately four inches tall. Probably the 25X1 II-A or III-A type. The switches are of what is known as the American type. The ballast is a mixture of gravel and sand. The ties are toaked from the top with petroleum residue. Probably either final or pre-final residue 25X1

#### CONPIDENTIAL

It is a wide gauge track, and when they receive locomotives from Germany, as they did in the last two years, they changed the locomotives to the wider

track.

COMCINERITIAL

25X1	
25.	
25X1	They have special crews that remove snow in winter and repeat and
25X1	maintain the railroad during the year. These brigades live along the railroad in small semps.
26.	
25X1	There were two guards on every bridge, and they had special guards to check your papers every 50 km on the train. This is restricted territory, and only the workers who belong here can pass. If semebody from House wanted to go through he had to get permission.
27.	· · · · · · · · · · · · · · · · · · ·
25X1	There are two main bridges, the destruction of which would put this whole northern region out of action. One is the bridge over the Pachern river, about two km from Northern. It is about 1,200 m longend is used only by the railroad; there is no read. In the winter the read runs over the ide, and in the summer they use ferries. There is snother important bridge over the
25X1	river Usa, about 700 to 800 miorg and cight: maior. It has one railroad track and room on each side for people on foot. People must have permission to walk across this bridge.
28.	
25X1	the 1501st Construction Company men used to talk about working on a
25X1	railroad that ran 800 km from Maisher to homeomoles. In 1924 many workers from the Pochora camp were sent to this new construction. They took along two voterinarians to check up on the condition of homes there, and these vetering
25X1	marians returned and told me about it.
29.	
25X1	Before the war they planned to build a railroad from Verkuta to Yugusha, but
25X1 :	I don't know too much about it. Under the new Fire Year Plan they are talking about double-tracking the railroad all the way from Verbuta to Motlas

	They are all dairy farms and the principal products are butter and meat, which are sent to the cities. Eight kn southwest from Medwethka, plant the west bank.	
	are sent to the cities. Eight has southwest from Medverbhas, along the west bank, is a large dairy farm called Skedrovashir. This dairy farm belongs to Inta prisoner camp. Here they have about 800 cars and 300-400 hectares of cultivared areas. Eighteen km from Medverbha on the east bank is Kenetabor, a village of about four house, and here is located the administrative center of a few collective farms. Five km from Kenetabor is Aranets, a libtle village of about 15 houses and the nearest place to the Urals. Russian geological expeditions usually stay here on route to the Urals. Seven has from Aranets or the weat bank is Respublika. This is the best crossing point across the "schern river. Care must be used along here to avoid the Byleyu river, a left-bank tributary. It is very swampy and horses can't go through it. Respublika is supposed to have aberticless kelkhoz in the area.  About five hm south is located Damilovka, a village of about 35 houses, and about five hm southeast in located Damilovka, a village of about 35 houses, and about five hm southeast is located Manduma About 21 hm from Kemmuna is Tarahka, and 12 km from Karaika is Voys, with about 800 people, all Russim actiliers. They were all exiled during the collectivization period of 1929-38. Most came from Voroneth and the Ruban region. They were not prisoners, but were controlled by the MVD and their return to Russia was profibited. Most worked in a factory producing grindstones. The factory was a co-operative belonging to the rayon executive committee, Rayspolkorn. There was also a collective farm of about 150 hectares of cultivated area with 200 cows and 40 horres about 6 km west of Voya. Petroleum test wells were sunk in 1934, but no oil was found. About 11 km from Soplyask. This was a fueling station for wood-burning tirer craft. About 13 km from Soplyask is Shehugor, About 25 houses are here. About 24 km from Shehugor, along the Shehugor is located wich. Blehevnik. This is a small fishing collective of about 10 hones. During the were arrested.	
25X1	10 km from sneadgor is federate-agree. This is in one continuanting occitions.

## CONFIDENTIAL

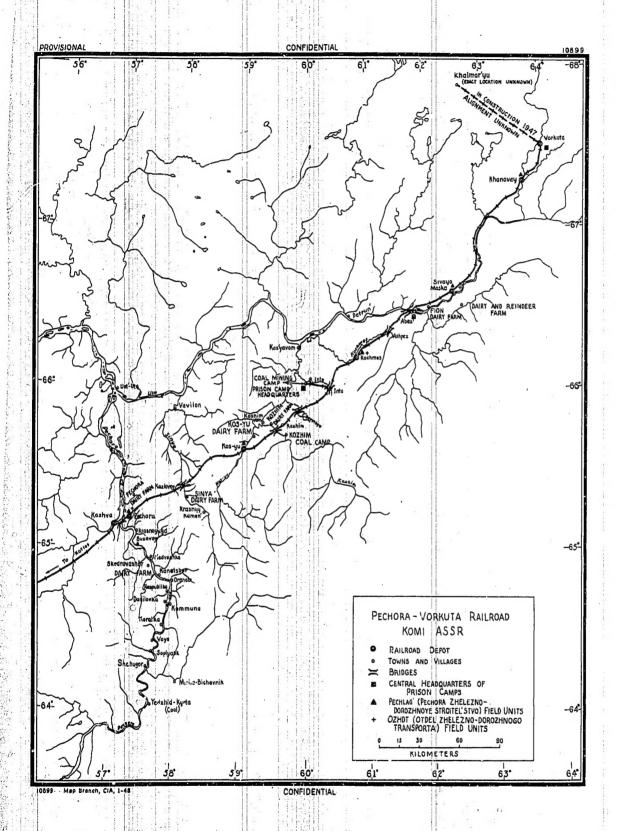

## 

CONFIDENTIAL 25X1 ્રાવ. 65. 25X1 36. 37 . The snow disappeared by June. Sometimes it snowed in June, but not a 25X1 permanent snow. In July and Au ust it was summer and it rained very often. In September we again had snow. From 1 May to 1 August it was light all 24 hours. 93. 25X1 The road was openious bed in 1920 di for an his tomoby is the construction of the railroad. It was a cordurey road, a timber road. As a section of railroad was completed, the road was taken out. The cimber in the road was used for firewood. There are still romants of the road scattered here and 25X1 there, but it is no longer in use. 39. At Medwashka, on the Pechora river, there starts a road that is used only in the winter. It runs through the forest to Skadrasyn, about 100 km. The road follows the Oronots river for 25 km and then forms eastward to Skedrasyn. Airfields 70 -25X1 71 . 72 73 There used to be an omergency landing field at Kozhim, but there were no buildings -- just a field. There would be good places to land on the bir wil collective farm near Shehugor, and on some of the other dairy forms, because 25X1 the ground already has been cleared. 740 25X1 75
